

OE Quality Products – OE Quality Manufacturing

QH Water Pumps, whether for the independent aftermarket or for vehicle manufacturers – impress on account of their uniform quality and identical technology.

Did you know Quinton Hazell have been manufacturing water pumps in their own production facilities for over 45 years and are proud to boast of many Original Equipment contracts during that time? And today – at the Colwyn Bay factory – it is the same machines, the same engineers and the same designs and technology that we use to manufacture our range of aftermarket water pumps; meaning the quality and care put into all original equipment water pumps is applied to all our aftermarket water pumps too!

Each design is subjected to a lifetime of testing on the specially developed cyclic test rig before finally being put into production. A world-class product guaranteed to exceed your expectations, from a company you can trust to deliver the quality you demand.

QH currently hold the following OE contracts for the manufacture of Water Pumps:

- Aston Martin V8 & V12 engines for all variants
- Jaguar V8 engine for XK8, Baby Lincoln (USA)
- Range Rover V8 engine for all variants including Sport and Vogue
- Nissan Micra
- GM Holden for Single and Double QHC 2.2 petrol engine

QH currently hold the following OE Spares contracts for the manufacture of Water Pumps:

- Rover KV6 engine fitted in sports variants of Rover 45 and 75
- GM – for most GM applications
- Volvo

Gut gemacht.
